EDUCATION

University of Colorado Boulder – Aug 2025 – May 2027

Master of Science in Computer Science (GPA: 3.74 / 4.00) – Boulder, Colorado

- Relevant Coursework: Big Data, Deep Learning, Neural Networks, NLP, Computer Vision

R V College of Engineering – Aug 2019 – Jul 2023

Bachelor of Engineering in Computer Science and Engineering – Bengaluru, India

- Relevant Coursework: Data Structures, Algorithms, Operating Systems, Software Engineering, DBMS, OOP

EXPERIENCE

Software Developer – Aug 2023 – Aug 2025

Oracle – Bengaluru, India

- Spearheaded a Python back-end platform on FastAPI and Ansible, designing client-server APIs and automating provisioning across infrastructure for engineering teams.
- Architected 15+ scalable REST and GraphQL APIs with role-based access control and clean API design, serving data to user-facing applications across enterprise teams.
- Engineered concurrent, asynchronous, event-driven Python services with object-oriented design, processing and modeling data with low-latency performance in production.
- Delivered maintainable code through CI/CD pipelines, code reviews, automated testing, and debugging, resolving production issues with operational excellence.

Backend Developer Intern – Sept 2022 – Nov 2022

Ideoholics – Remote

- Shipped scalable Java and Spring Boot REST APIs in a microservices architecture serving 200,000+ requests per day at production scale.
- Structured maintainable multi-tenant backend logic with secure tenant isolation, supporting 37 enterprise clients in production.
- Hardened 300+ API endpoints with encryption and access controls, enforcing authentication, security, and compliance to protect customer data.

PROJECTS

MeshML: Distributed Platform for ML Training | Python, gRPC, Kubernetes, GCP, Docker

- Pioneered MeshML, a fault-tolerant Python microservices platform with gRPC client-server APIs for worker coordination, deployed on GCP Kubernetes.
- Drove high throughput with dataset sharding, bidirectional gRPC streaming for concurrent worker scheduling, and fault recovery via object storage and state persistence.

ML Model A/B Testing Framework | Python, FastAPI, PostgreSQL

- Crafted a high-performance FastAPI service with consistent-hashing API routing, a model registry, and lifecycle management for deterministic request handling.
- Devised automated test pipelines computing accuracy, F1-score, AUC, and p95/p99 latency with statistical inference modules for performance validation.

F1 Telemetry Data Pipeline | Python, FastAPI, SSE, async, Pydantic

- Designed a Python FastAPI backend processing telemetry data through async scheduling and Server-Sent Events for low-latency live delivery to clients.
- Established an evaluation and observability harness with Pydantic-validated data models and structured logging for live pipeline monitoring.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, SQL, Bash

Backend & APIs: Spring Boot, FastAPI, Node.js, REST, GraphQL, gRPC, Client-Server APIs, Microservices

Cloud & Distributed Systems: AWS, GCP, Azure, Docker, Kubernetes, CI/CD, Git, Unix/Linux

Databases & Foundations: PostgreSQL, MySQL, MongoDB, Redis, Data Modeling, Data Structures, Algorithms, OOD
